Capture record

Session ID: sess-401128290134
Licence holder: Forehead s.r.o.
Licence reference: L-AB12-CD34
Device: #3
Started: 2026-10-22 10:00:00 UTC
Completed: 2026-10-22 17:53:38 UTC
Number of files: 4
Total size: 4 961 B (4.8 kB)

Package description (entered by the operator)

Kontrola provozovny, č. j. SZPI/1/2026

This description was entered by the person who preserved the evidence. It is not a value determined by the tool.

Qualified timestamp (eIDAS)

✓ **Document carries a qualified electronic timestamp**

The timestamp is embedded in this document (document timestamp per ETSI EN 319 142, PAdES profile) and covers the entire file including attachments. Its validity and issuer details are shown by your PDF reader in the signature panel. Any later revision of the document is detected by the gpa-verify tool.

Preserved files

File 1: protokol-kontroly.pdf

File in the evidence: files/01/protokol-kontroly.pdf
Size: 1 652 B (1.6 kB)
Type (determined from content): application/pdf
SHA-256 digest: a94ba241b2ad70076527653a12a2a2e86531a063d9c018fb4c9f3bec021ab0b6
SHA-512 digest:

29b05e4f3f5cde6d3b8f1406f5d47b1d 536796620c95c42061b9a533672b4096
3ab8e743c46d563b8717008c4275831f 04c5677c0590c941424c388fca45566f

Origin: file supplied by the operator (from the operator's computer)
Times from the operator's file system:

modified 2026-10-22 17:53:38 UTC; created not recorded — supplied by the operator's computer, not verifiable

Embedded metadata:

– 2 page(s)
– title Kontrolní protokol 42/2026
– author Inspektor Novák
– produced by ReportLab
– created 2026-01-15T09:30:00+01:00
– signature fields: 1 (filled: 0) — the tool does not validate signatures

Metadata are values stored inside the file. The tool only read them and does not verify them — anyone could have written them into the file.

Operator's note — file 1

Protokol předaný kontrolovanou osobou

This note was entered by the person who captured the evidence. It is not a value determined by the tool.

File 2: foto_provozovna.jpg

File in the evidence: files/02/foto_provozovna.jpg

Size: 1 977 B (1.9 kB)

Type (determined from content): image/jpeg

SHA-256 digest: 626e3d4608aea106a264bb8598bd83ac5dec6b4ff004176ca923fb56a796000e

SHA-512 digest:

41b2c63f52fa62f144bf4e785f5013c5 8ca240b9622527d0b7e14d20daaf7e9e
3f49be43153f455eecaed7182b8b42f7 f0f1ad4a37eb5fe0be8fb00b4934a90d

Origin: downloaded by the tool from a URL in the operator's browser session

Requested address: https://shop.example.cz/media/foto.jpg?id=5

Redirect: HTTP 302 → https://cdn.example.cz/f/foto_provozovna.jpg

Final address: https://cdn.example.cz/f/foto_provozovna.jpg

Server response:

HTTP 200; received 1 977 B (1.9 kB); request 2026-10-22 10:01:00 UTC – 2026-10-22 10:01:01 UTC

Response headers:

– content-type: image/jpeg
– etag: "abc"

Browser profile: default session of the built-in browser — with the operator's logins and cookies

DNS (separate lookup by the tool) — cdn.example.cz: 192.0.2.10

Server certificate (TLS):

cdn.example.cz · issued by Let's Encrypt · valid until 2027-01-01 (certificate the application verified for this server during this run)

Embedded metadata:

– dimensions 320 × 240 px
– taken (EXIF DateTimeOriginal) 2026:10:20 14:03:11
– device Canon Canon EOS R6
– contains location data (GPS) — the coordinates are not printed in this report; they are in the sealed file

Metadata are values stored inside the file. The tool only read them and does not verify them — anyone could have written them into the file.

Preview (reduced copy; the digests above refer to the original file)

File 3: smlouva.docx

File in the evidence: files/03/smlouva.docx

Size: 1 257 B (1.2 kB)

Type (determined from content):

application/vnd.openxmlformats-officedocument.wordprocessingml.document

SHA-256 digest: 4727f51423711bb8ca2f4dd5b0169b00d7eed6720018a0f49b12d5300ba58b68

SHA-512 digest:

d169620a8a97e29f470c7d2cf402108f 3da5b0a4e025df69da0daee00bdf3cf5
acb4d956c1e733d4be92800a044a187d 9cd1e54dc30c7ddd0541517ec6280d0a

Origin: downloaded in the built-in browser (Downloads panel)

Download address chain:

– https://portal.example.cz/dl?id=1
– https://portal.example.cz/dl/smlouva.docx

Type reported by the server: application/octet-stream

ETag: W/"77"

Download: started 2026-10-22 09:58:00 UTC; completed 2026-10-22 09:58:02 UTC

Check after download:

content unchanged since the download completed (digest at completion matches)

Embedded metadata:

– title Smlouva o dodávce
– author Jana Dvořáková
– last modified by Petr Svoboda
– created 2026-03-01T08:15:00Z
– modified 2026-10-19T16:40:00Z
– revision 7
– application Microsoft Office Word

Metadata are values stored inside the file. The tool only read them and does not verify them — anyone could have written them into the file.

File 4: zaznam.txt

File in the evidence: files/04/zaznam.txt

Size: 75 B

Type (determined from content): text/plain

SHA-256 digest: 4c74fa5cfb98cedfc4d441f1b3b16449ae9fdee821ec1ca9c5ce3983bb0af2be

SHA-512 digest:

425c62028b724be49bd1f010a9afd7c6 06e621f6145a210597e965d55ebfd051
33c315f1e872a9cfec87a4db7c2399e3 81cbea87c936f0d10d15224d66dcf00f

Origin: file supplied by the operator (from the operator's computer)

Times from the operator's file system:

modified 2026-10-22 17:53:38 UTC; created not recorded — supplied by the operator's computer, not verifiable

Attachments embedded in this document

The following files are embedded directly in this document and are covered by its qualified electronic timestamp. The SHA-256 digests allow you to verify that an extracted file is identical to the one that was sealed.

Number of attachments: 12

Total attachment size: 15 726 B

Open the attachments in Adobe Acrobat Reader via the side panel (paperclip icon). Note: ordinary browsers (Chrome, Edge) do not display PDF attachments — use Acrobat Reader or another full-featured PDF tool.

Methodology and limitations

Tool: GetProofAnchor Forensic Browser 1.5.0 (gpa-forensic-browser-1.5.0)

Browser engine: Chromium 148.0.7778.5 · Electron 44.3.0

Operating system: win32 x64 10.0.22631

Capture method:

the operator selected the files; the tool read each file without modification, copied it into the evidence, computed its SHA-256 and SHA-512 digests, determined its type from the content and read its embedded metadata; files from a URL were downloaded by the tool itself in the default session of the built-in browser, recording every redirect, the server response, DNS and the TLS certificate

Detailed metadata: capture/capture_meta.json, files/NN/source.json

Limitations. The timestamp proves that exactly these bytes (the SHA-256 and SHA-512 digests above) existed at the time of the timestamp and have not changed since. It does not prove who created a file or that its content is true. A file from the operator's computer is sealed as supplied by the operator; file-system times come from the operator's computer and cannot be verified. A file from a URL is the content the server delivered at that time to the operator's browser session (with its logins and cookies); another user may have received different content. A file from the Downloads panel is the content the built-in browser saved to disk; the tool verified that it has not changed since the download completed. Embedded metadata were only read by the tool and are not verified.

How to verify this evidence

The time-stamp is embedded in this document and covers the entire file including its attachments. Its qualified status is checked by your PDF reader (e.g. Adobe Acrobat Reader, signature panel) against the EU Trusted List. The document carries no long-term validation (LTV) data, so the reader's result depends on what the list provides at the time of checking. The gpa-verify tool performs an independent check, including detection of later revisions. To verify an individual artefact, extract it from the attachments (paperclip icon) and compare its SHA-256 digest with the value listed above or in the enclosed manifest.json.

Authenticity verification

The document is tamper-evident. Changing any time-stamped byte, including the content of an attachment, breaks the timestamp. An incremental update (a revision appended after the timestamp) does not break it and a PDF reader may not flag it prominently; the gpa-verify tool detects any later revision and verifies the time-stamped version. Verification requires no involvement from the vendor.
